

Powerful Whittle Redirect

Powerful Whittle Redirect is a tool to take a long url and make it into a tiny or whittle url. For example, the url <http://www.google.com/search?hl=en&q=powerful+wittle+redirect&aq=f&oq=&aqi=g10> can be truncated and whittled down to <http://pwr.com/1W>

This allows you to use a much shorter url for use in Twitter, Facebook, emails, or any other place that you need to conserve space and have a cleaner looking small url.

Powerful Whittle Redirect is free and easy to use. Go to <http://pwr.com> and give it a try to start making your own little urls.

Instructions

On the main page, just enter in the long url in the text box provided. You can copy and paste it from somewhere else. To copy and paste, highlight the url you want to make small, then press CONTROL-C in Windows, or OPTION-C on the Mac, to copy the URL into the clipboard. Now click on the Powerful Whittle Redirect text box where it states “Enter a Long URL to make Whittle:”. To paste the URL that was copied into the clipboard press CONTROL-V in Windows, or OPTION-V on the Mac. Now click on the Make Whittle URL button. The next screen will display your NEW Whittle URL. It’s just that easy.
